NZ Open Work Visa valid to Feb 2029

PROFESSIONAL SUMMARY

SQL focused Business Analytics and AI Operations Specialist with proven experience turning complex enterprise datasets into decision ready intelligence. Proficient in telemetry diagnostics, automated API reporting workflows, and building LLM powered business intelligence applications across cloud data lakes. Proven ability to bridge technical engineering and stakeholder requirements to streamline operational processes and deliver measurable business value.

SKILLS

AI & Automation: Claude & OpenAI APIs (hands-on, production deployment) | AI Agents | n8n (hands-on) | Microsoft Power Automate (working knowledge) | Prompt Engineering (applied) | REST APIs & Webhooks (applied) | MCP (working knowledge)

Data Engineering & Analytics: SQL (industry-use level) | Power BI (working proficiency) | Python (industry-use level) | ETL/ELT | Power Query | DAX | Snowflake | Telemetry Diagnostics & Anomaly Detection (applied)

Business Analysis & Delivery: Process Mapping (applied) | UAT & Root Cause Analysis (applied) | Requirements Gathering | Agile Environments | Client Engagement | Process Improvement

Systems & Collaboration: GitHub | Railway | Vercel | MS Office (Excel, Word, PowerPoint) | Cross-Functional Collaboration | Independent Delivery

PROFESSIONAL EXPERIENCE

- Data Logician & Field Services Specialist, AA New Zealand**

Apr 2026 to Present

 - Queried and analysed operational roadside telemetry data across enterprise data lakes using SQL to isolate root causes behind service friction and reduce MTTR for cross-functional teams.
 - Maintained & automated reporting pipelines, incident tracking logs, and KPI standards, keeping data accurate and consistent across field service operational metrics.
 - Communicated performance findings and operational insights directly to internal leadership and key clients, supporting data-driven reviews and service improvement cycles.
- Customer Insights Specialist, Uber Process, Teleperformance**

Jul 2022 to Dec 2023

 - Built & automated end-to-end ETL reporting workflows using SQL and Power Query, converting complex interaction streams into structured summaries and saving 15 to 20 hours per month.
 - Analysed high-volume customer experience telemetry to isolate complaint drivers and operational bottlenecks, delivering weekly insight reports for executive leadership.
 - Audited & restructured knowledge base data systems and incident tracking workflows, reducing recurring ticket resolution delays and improving frontline operational consistency.
- Customer Experience & Operations Specialist, Upstox**

Apr 2021 to Apr 2022

 - Analysed user onboarding conversion funnels and customer acquisition datasets in a commercial fintech setting, mitigating onboarding drop-off by 20 to 25 percent.
 - Engineered structured escalation backlog tracking frameworks to resolve complex customer issues, driving alignment across product, compliance, and support engineering teams.
 - Formulated & presented quantitative customer trend reports to executive stakeholders, driving data-backed iterations to trading platform onboarding flows.
- Data Associate, Wipro Limited**

Oct 2019 to Mar 2021

 - Validated & audited 100,000+ healthcare transaction records using SQL and Power BI, resolving reporting gaps, schema mismatches, and compliance inconsistencies across client-facing data delivery pipelines.
 - Executed regular User Acceptance Testing (UAT) cycles, data quality audits, and custom KPI reports to ensure strict metric alignment before client delivery.

SELECTED PROJECTS

- AI BI Copilot | Developer

Live Project

 - **Problem:** Non-technical business stakeholders required immediate answers from cloud data lakes without waiting for custom SQL query backlogs or manual report compilation.
 - **Technical Implementation:** Built a Python- and LLM-powered Business Intelligence assistant that translates natural language questions into executable SQL queries and Power BI models.
 - **Outcome:** Automated real-time trend analysis and anomaly detection, supporting faster, data-confident performance tracking for business leadership.
- AI CV Assistant | Founder & Developer

Live Project | GitHub

 - **Problem:** Job application workflows require repetitive, time-consuming manual formatting and document tailoring across different role specifications.
 - **Technical Implementation:** Architected a production AI agent using Claude API, Railway, and Vercel featuring a two-stage prompt chaining workflow (structured JSON schema generation followed by deterministic rendering).
 - **Outcome:** Deployed an automated pipeline that parses unstructured career histories into ATS-optimized CV documents in seconds with zero styling overhead.
- Kiwi Budget Tours | Founder & Insights Lead

kiwibudgettours.com

 - **Problem:** Independent travelers in New Zealand struggled to aggregate pricing, transport options, and custom itineraries across fragmented tourism datasets.
 - **Technical Implementation:** Engineered an end-to-end booking platform integrated with a WhatsApp-connected AI planner linked to structured New Zealand tourism datasets.
 - **Outcome:** Automated dynamic itinerary generation and real-time customer booking flows, creating an accessible direct-to-consumer travel experience.
- Generative AI Business Process Automation | AI Automation Analyst

Live Project

 - **Problem:** Operations teams spent substantial manual effort on recurring data compilation, summary drafting, and cross-platform reporting tasks.
 - **Technical Implementation:** Designed multi-step Claude and OpenAI API workflows integrated via REST endpoints and webhooks, featuring human-in-the-loop validation checkpoints.
 - **Outcome:** Reduced recurring reporting cycles by 70 percent while preserving data accuracy and compliance review controls.
- Gilmours Distribution Workflow Analysis | Operational Analyst

Live Project

 - **Problem:** Distribution operations faced recurring delivery delays and dispatch friction across driver routes and warehouse logistics.
 - **Technical Implementation:** Conducted stakeholder interviews with drivers, dispatchers, and warehouse staff to map end-to-end supply workflows and isolate operational bottlenecks.
 - **Outcome:** Delivered a data-backed process redesign case proposing automated scheduling adjustments, projecting a 20 percent reduction in operational delays.
- Fuel Prices & EV Demand in NZ | Masters Thesis Analyst

Live Project

 - **Problem:** Assessing macroeconomic fuel price volatility and infrastructure readiness impact on consumer electric vehicle adoption across New Zealand.
 - **Technical Implementation:** Analysed 15 years of panel data across 4 countries alongside a 103-respondent empirical survey using Granger causality tests, price elasticity analysis, and ARIMA forecasting models.
 - **Outcome:** Translated quantitative econometric outputs into actionable strategic recommendations for energy transition and demand forecasting.

EDUCATION

- Master of Applied Business — Business Analytics, Unitec Institute of Technology

Auckland, NZ | 2024 to 2025

 - Coursework focused on predictive modelling, business intelligence, digital transformation, and converting data into commercial business strategy.
- Bachelor of Technology — Automobile Engineering, Rajasthan Technical University

India | 2015 to 2019

 - Designed and built a solar powered vehicle as part of a team representing the university at a national engineering championship.
